DETAILED ACTION

Specification

The amendment filed 18 August 2005 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is the new language in the independent claims.

Applicant is required to cancel the new matter in the reply to this Office Action. There is no support found in the original specification for the new language in claims 1, 10 and 23. There is nothing disclosed concerning the "control signal" being based on the "number of data bits" (emphasis added). The specification expressly states that the "control signal" is based on the value on the "data bits".

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-29 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Application/Control Number: 10/799,783 Page 3

Art Unit: 2816

There is no support found in the original specification for similar reasons as discussed above.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, lines 4-6, there is no support found for the newly recited language, similarly as discussed above.

Claims 2-9 are rejected as not overcoming the indefiniteness discussed above with claim 1.

Claims 10-29 are rejected for similar reasons as claims 1-9.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 7-12, 14-16, 23-24 and 27-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Morishita (USPN 6,184,744). Morishita discloses, in Fig. 2, a circuit comprising: "a control signal generating circuit (1d) for generating a control signal (at gate of 1e) according to a number of data bits (ACT and SIG)"; "a comparing circuit (N3-N5, P7 and P8) enabled by

Art Unit: 2816

being provided an external power voltage (the supply voltage having the nodes EXV and ground) as a power voltage when the control signal is inactivated.(e.g., when ACT is high and SIG is low) and for comparing a reference voltage (Vref) to an internal voltage (IntVcc) to generate a driving signal (NDA) when the control signal is inactivated"; "a driving signal control circuit (1e)"; and "an internal voltage driving circuit (DRM) for receiving an external power voltage and generating the internal voltage in response to the driving signal", all connected and operating similarly as recited by Applicant.

Examiner has fully considered Applicant's remarks for the above rejection and has not found them to be persuasive. Contrary to Applicant's remarks, the "comparing circuit" is "enabled by being provided an external power voltage (the supply voltage having the nodes EXV and ground) when the control signal is inactivated (e.g., when ACT is high and SIG is low). This being due to transistor N5 turning on. Also, transistor 1e will turn on to inactivate the "driving signal" when the "control signal is activated" (e.g., when both ACT and SIG are high). Lastly, when 1e shorts the gate of DRM to ground, EXV will be provided to IntVcc.

Claims 4-6 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Application/Control Number: 10/799,783 Page 5

Art Unit: 2816

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Terry Cunningham whose telephone number is 571-272-1742. The examiner can normally be reached on Monday-Thursday from 7:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy P. Callahan can be reached on 571-272-1740. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
